*For a sustainable future*

## ■ KMP Mysinge & Solberga – tradition and elegance

KMP Mysinge has a cast iron front, top and sides in a traditional design that will last for years and years. KMP Solberga has black-painted, sheet metal plate front, top and sides. Solberga's design is characterised by the three-pane, brass trimmed window that gives the stove its elegant character. The generous glass sections of both models mean that the flames can be seen from several angles.

The stoves are developed and manufactured in Sweden and imbued with a feeling of genuine quality. As an option, three different types of natural stone are available for the top and sides in order to give a more personal stamp.

### The stove lights itself

The KMP stoves are designed to work as a primary heat source. A high level of efficiency, in combination with automatic operation, means that the stove replaces up to 80% of the heating in a normal family house with electricity as the heating source.

The KMP stoves are P-marked and their fans and patented fuel-feeding system make them the quietest pellet stoves on the market. The desired room temperature is easily regulated from the control panel. During thermostatic operation the stove is ignited and extinguished automatically in order to maintain the correct temperature.

Filling with pellets is simple, through the hatches on the top of the stove. The capacious hopper enables the stove, in a normal family house, to burn for 1-2 days before having to be refilled..

### Chimney or not?

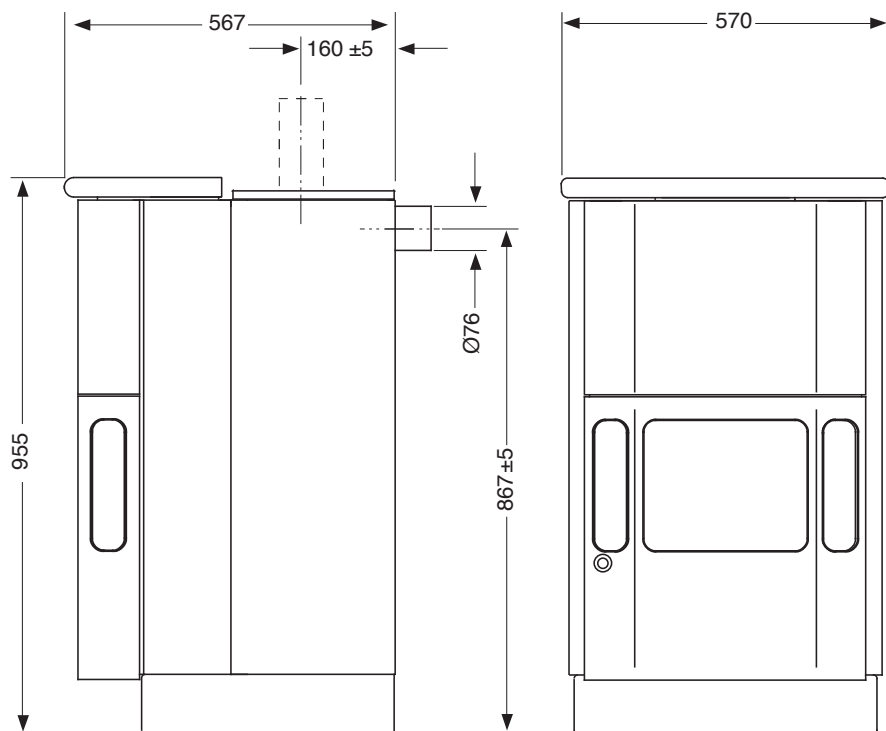

The stove can be installed without a traditional chimney if your home does not have one. The solution that makes this possible is called KMP Draft, which is a patent-pending fan controlled flue gas duct that goes straight out through the wall. Even connection to a traditional chimney, new or old, is extremely easy as only one operation is needed for upward or backward connection.

# ■ PELLET STOVE KMP MYSINGE / SOLBERGA

KMP SOLBERGA  
Optionally equipped  
with soapstone top and  
sides.

KMP MYSINGE  
Optionally equipped with  
black limestone top and  
sides.

As an option, the top and sides of the stove can be obtained in soapstone, rustic grey limestone or polished black limestone.

Soapstone

Grey limestone

Black limestone

Technical data		
Heating output	kW	3-6
Hopper	litres	38
Burning time	hours	18-40
Efficiency level	%	approx 93
Mains connection		230V, earthed
Flue pipe diameter	mm	76
Weight	kg	approx 138

#### Optional extras:

- Top and side panels in natural stone
- Glass floor protection
- Water jacket
- Emergency power pack
